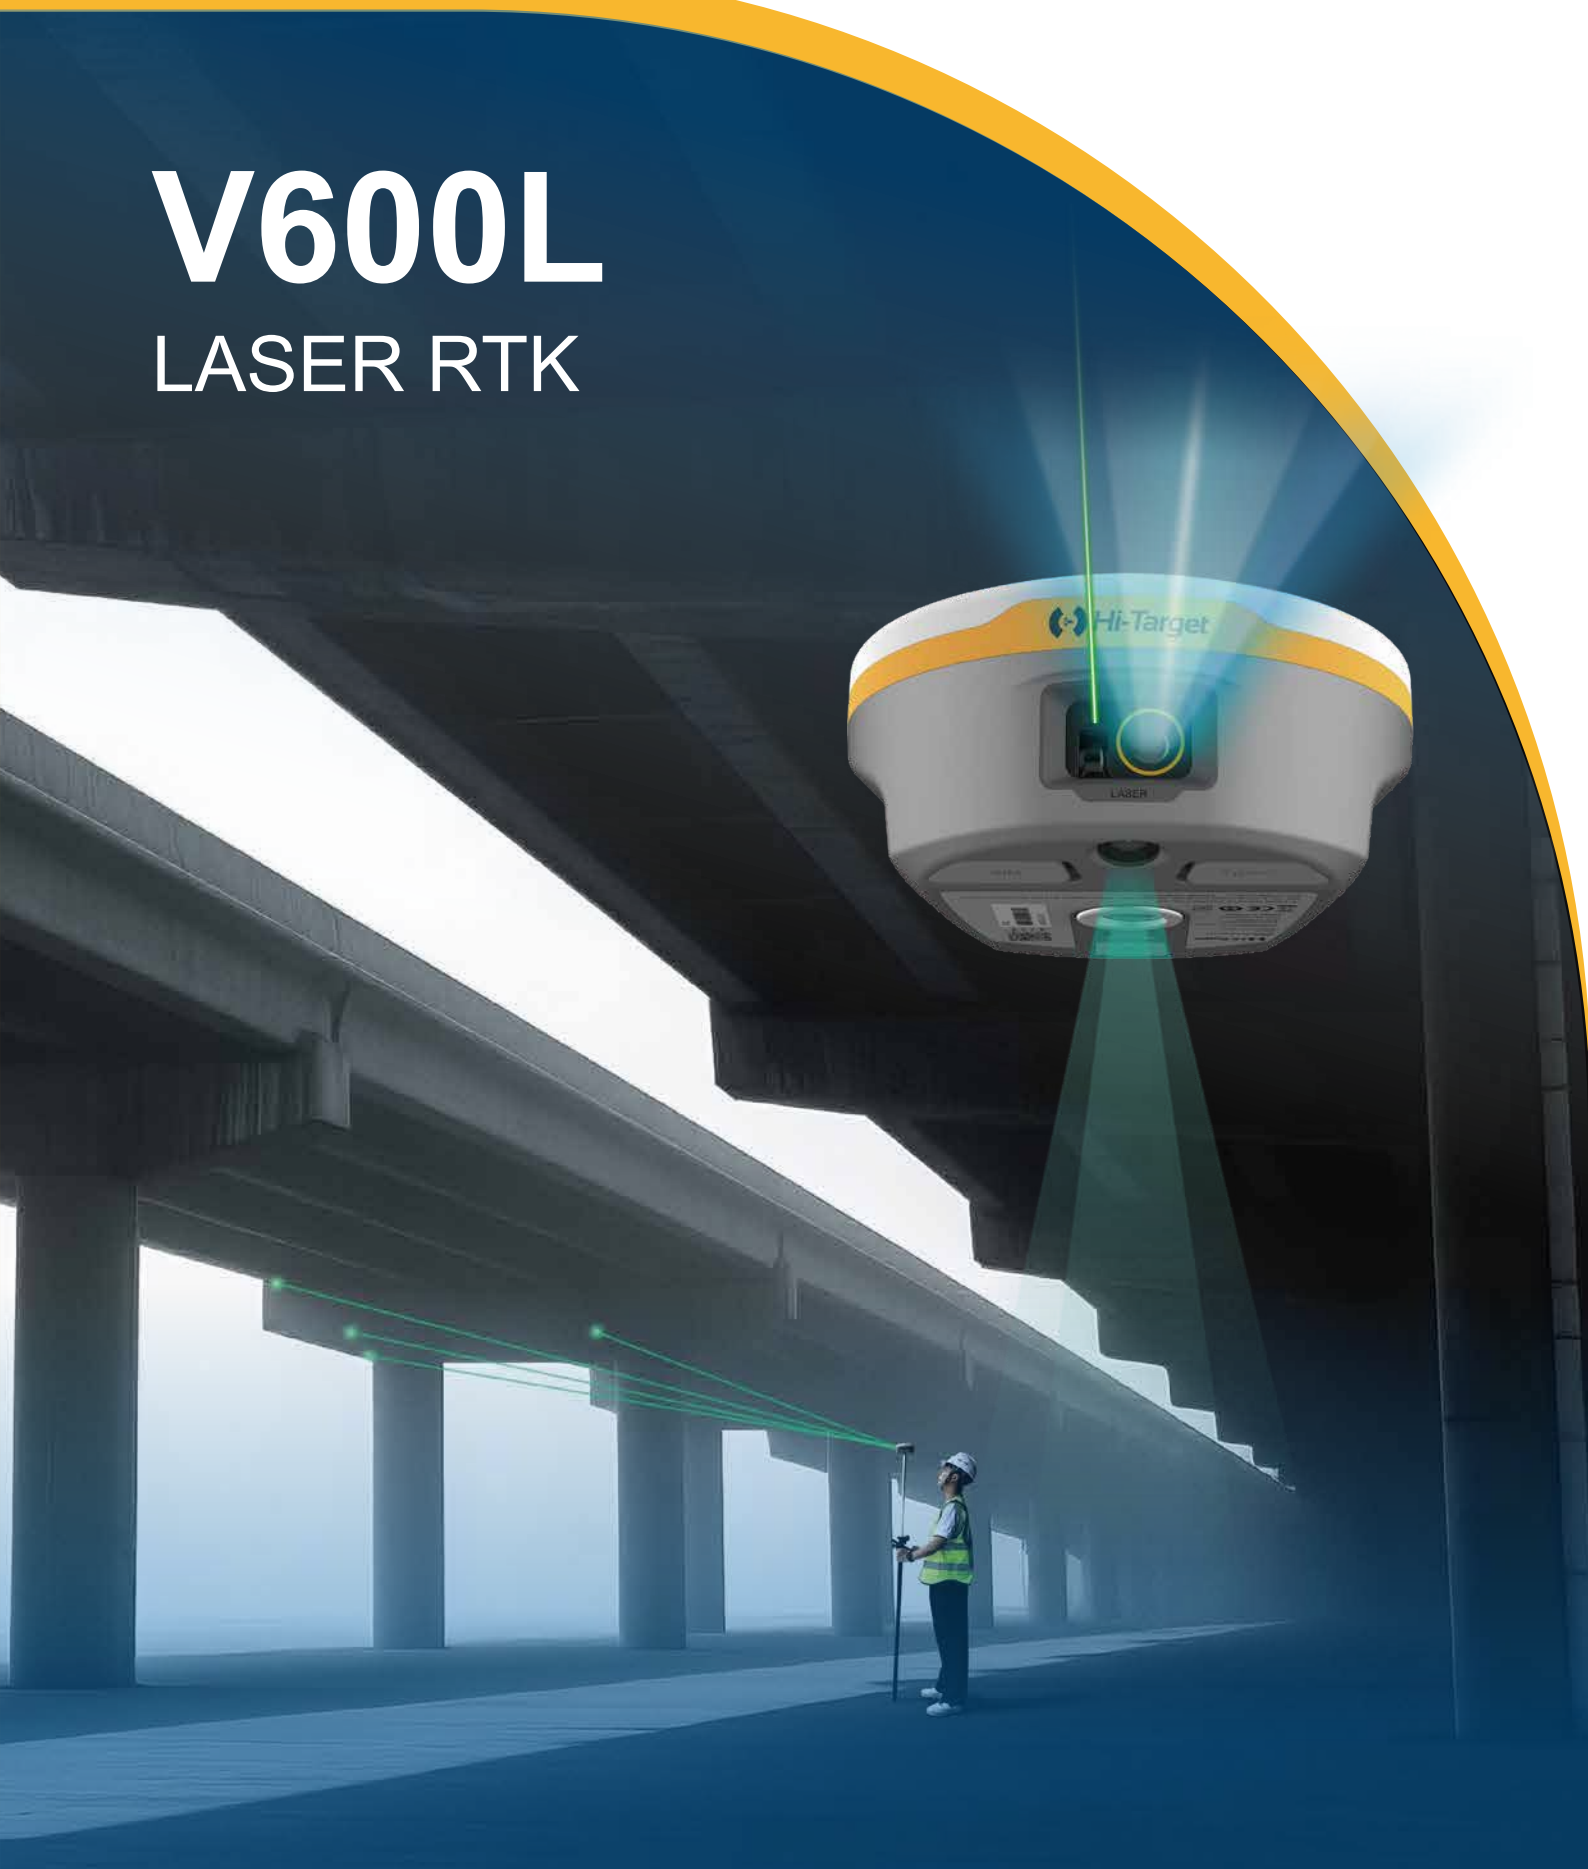
LASER RTK



V600L LASER RTK

Hi-Target next-generation Laser RTK that combines GNSS, IMU, dual-camera, and visible laser technologies for immersive, efficient, and precise fieldwork—especially in environments like under bridges, near fences, or across ditches.

With visualized laser targeting and non-contact measurement, it unlocks a new level of accessibility and safety in obstructed, complex, or semi-enclosed terrains.

High-Precision Laser Surveying —— Even Without GNSS

By fusing laser and visual technologies, our system delivers non-contact measurements with up to 2 cm accuracy within 10 m. Operate confidently in GNSS-denied environments such as under bridges, inside fenced zones, or across ditches, all from a safe and convenient distance.

IMU You Can Trust — No Initialization Needed

With automotive-grade IMU, no initialization needed. Start measuring instantly with up to 40% better stability and accuracy, even on rugged terrain.

Built-in LoRa Radio, Cross-Brand Compatibility

Integrated LoRa transceiver supports multiple protocols and brands, delivering over 15 km working range in typical environments.

Note:
[1]QZSS L6 can be provided by firmware upgrade.
[2]The measurement accuracy, precision, reliability and initialization time depend on various factors, including tilt angle, number of satellites, geometric distribution, observation time, atmospheric conditions and multi-path validation, etc. The data are derived under normal conditions.
[3]Accuracies are dependent on GNSS satellite availability. Hi-Fix Positioning ends after 5 minutes without differential data.Hi-Fix is not available in all regions, check with your local sales representative for more information.
[4]Irregular operations such as rapid rotation and high-intensity vibration may affect the inertial navigation accuracy.
[5]Rechargeable built-in 7.2V / 4900 mAh lithium battery; operating time varies with environment, temperature, and battery condition.
[6] This distance can be achieved when using a super base station.
